Application of rates:—500 at 1,000 rate; 5,000 at 10,000 rate; 50,000 at 100,000 rate in same variety and size. Boxing will be added at actual cost. Terms:—30 days Net.

What Shall We Do About It?

(From American Forestry, August, 1919)

"The original forest area of the United States was 850 million acres.

There now remains in virgin timber about 230 million acres, about one-fourth the original area.

Our total present acreage of forest and cut-over lands is about 500 million acres.

One hundred million acres of this is waste land which produces nothing, and 180 million acres more contain more or less second growth timber.

A large percentage of this second growth timber is of inferior quality.

The new growth of timber is not more than one-third of the amount which is being used or destroyed each year."

Fortunately these conditions have been foreseen and have made their impressions on far-sighted individuals, institutions and corporations. Noticeable interest and action among Lumber, Paper, Mining, Railroad, Water, Powder and Chemical Companies the last few years has resulted in an increased demand for dependable planting stock.

The Hill Nursery, growers of forestry trees since 1855, maintain the largest Evergreen propagating nursery in America. Our years of experience in growing, packing and handling leave their distinct mark of superiority on every shipment that leaves our nursery. If you have any problems to handle in connection with your forestation or reforestation—our advice is free for the asking.
